The Secretary-General of the United Nations, acting in his capacity as depositary, communicates the following:

On 22 November 1994, the Government of the Netherlands proposed, in accordance with article 12, paragraph 1, of the above-mentioned Agreement, several amendments to Regulation No. 37: ("Uniform provisions concerning the approval of filament lamps for use in approved lamp units of power-driven vehicles and of their trailers") annexed to the Agreement.

A copy, in the English and French languages, of the document containing the text of the proposed amendments is transmitted herewith (Supplement 11 to the G3 series of amendments to Regulation No. 37 in its original form: doc. TRANS/WP.29/412).

In this connection, the Secretary-General wishes to draw attention to paragraph 1 of said article 12 of the Agreement, which reads as follows:

"Any Contracting Party applying a Regulation may propose one or more amendments to it. The text of any proposed amendment to a Regulation shall be transmitted to the Secretary-General of the United Nations, who shall transmit it to the other Contracting Parties. The amendment shall be deemed to have been accepted unless within a period of three months following this notification a Contracting Party applying the Regulation has expressed an objection, in which case the amendment shall be deemed to have been rejected. If the amendment is deemed to have been accepted, it shall enter into force at the end of a further period of two months."

16 January 1995

Working Party on the Construction of Vehicles

DRAFT SUPPLEMENT 11 TO THE 03 SERIES OF AMENDMENTS
TO REGULATION No. 37
(Filament lamps)

Note: The text reproduced below has been adopted by the Working Party on the
Construction of Vehicles at its one-hundred-and-third session
(TRANS/WP.29/408, para. 63). It is based on document TRANS/WP.29/R.660, not
amended.
List of Contents, annexes, annex 1.

Sheets HS1, delete the words "(halogen filament lamp for motor cycles)."

Add at the end of the list new sheets, to read: */

"....
Sheets H27W
Sheets P27W
Sheets P27W/7W
Sheet WY5W
Sheets H21W
Sheets W21W
Sheets W21/5W"

Paragraph 2.4.3.1. footnote 4/, amend to read:

"4/ 1 for ..., 8 for the Czech Republic, ... 23 for Greece, 24 (vacant),
  25 for Croatia, 26 for Slovenia and 27 for Slovakia. Subsequent
  numbers ...."   

Annex 1, Sheets HS1/1, HS1/2, HS1/3, HS1/4, HS1/5, in the titles delete the
words "HALOGEN MOTOR CYCLE FILAMENT LAMP" (five times) and further, at the
bottom of Sheet HS1/1, delete the words "TO BE USED ON MOTOR CYCLES ONLY."

*/ The first five filament lamp categories were added by Supplement 10 to the
03 series of amendments to Regulation No. 37 (TRANS/SC.1/WP.29/R.652).
Annex 1, add at the end new Sheets W21W/1, W21W/2 and W21W/3 to W21/1W to W21/1W/3, to read as follows:

**CATEGORY W21W**

Reference luminous flux : 460 lm at approx. 13.5 V

1/ Maximum lateral deviation of filament centre from two mutually perpendicular planes both containing the reference axis and one containing the axis X-X.

2/ To be checked by means of a box system, sheet W21W/2.
Screen projection requirements

This test is used to determine, by checking whether the filament is correctly positioned relative to the reference axis and the reference plane and has an axis perpendicular, within ±15°, to the plane through the axis X-X and the reference axis, whether a filament lamp complies with the requirements.

Side elevation

Reference axis

Front elevation

Test procedure and requirements.

1. The filament lamp is placed in a holder capable of being rotated about its axis and having either a calibrated scale or fixed stops corresponding to the angular displacement tolerance limits, i.e. ±15°. The holder is then so rotated that an end view of the filament is seen on the screen on to which the image of the filament is projected. The end view of the filament shall be obtained within the angular displacements tolerance limits (±15°).

2. Side elevation

The filament lamp placed with the cap down, the reference axis vertical and the filament seen end-on, the projection of the filament shall lie entirely within a rectangle of height "a" and width "b", having its centre at the theoretical position of the centre of the filament.

3. Front elevation

The filament lamp placed with the cap down and the reference axis vertical, the filament lamp being viewed in a direction at right angles to the filament axis:

3.1 The projection of the filament shall lie entirely within a rectangle of height "a" and width "h", having its centre at the theoretical position of the centre of the filament.

3.2 The centre of the filament shall not be offset by more than distance "k" from the reference axis.

</tbody>
</table>

Reference luminous flux: 440 and 35 lm at approx. 13.5 V

1/ To be checked by means of a box system, sheets W21/SW/2 & 3.

2/ Maximum lateral deviation of major filament centre from two mutually perpendicular planes both containing the reference axis and one containing axis X-X.

3/ "x" and "y" denote the offset of the axis of the minor filament with respect to the axis of the major filament.
Screen projection requirements

This test is used to determine, by checking whether:
(a) the major filament is correctly positioned relative to the reference axis and reference plane and has an axis perpendicular, within ± 15°, to the plane through the axis X-X and the reference axis; and whether:
(b) the minor filament is correctly positioned relative to the major filament, whether a filament lamp complies with the requirements.

Test procedure and requirements.

1. The filament lamp is placed in a holder capable of being rotated about its axis and having either a calibrated scale or fixed stops corresponding to the angular displacement tolerance limits. The holder is then so rotated that an end view of the major filament is seen on the screen on to which the image of the filament is projected. The end view of that filament shall be obtained within the angular displacement tolerance limits. (± 15°).

2. Side elevation
The filament lamp placed with the cap down, the reference axis vertical, and the major filament seen end-on:

2.1 the projection of the major filament shall lie entirely within a rectangle of height "a" and width "b", having its centre at the theoretical position of the centre of the filament;

2.2 the projection of the minor filament shall lie entirely within a rectangle of width "c" and height "d" having its centre at a distance "u" above the theoretical position of the centre of the major filament.

3. Front elevation
The filament lamp placed with the cap down and the reference axis vertical, the filament lamp being viewed in a direction at right angles to the axis of the major filament:

3.1 the projection of the major filament shall lie entirely within a rectangle of height "a" and width "b", centred on the theoretical position of the centre of the filament;

3.2 the centre of the major filament shall not be offset by more than distance "k" from the reference axis;

3.3 the centre of the minor filament shall not be offset from the reference axis by more than ± 2mm (±0.4 mm for standard lamps).
